Many small and medium-sized enterprises are willing to contribute their part to tackle climate change, but do not know how to begin with little effort. A start-up from northern Germany developed an easy to adapt software which calculates an enterprises' entire climate footprint, based on financial transactions. The detailed result shows access points for improvement in every section and identifies crucial parts with need of change. Enterprises from all sectors are sought for cooperation.

Azonosító kód: BODE20230515004

A German company working in development and production of high efficiency 3D parts is specialised in blowing technology for optimization of material costs. The Fiber Injection Moulding technology is applicable to nearly all kinds of sectors. The company is looking for project partners with new or residual materials and offers to develop new ways of usage and new products. The collaboration can be under commercial or supplier agreement.

Azonosító kód: BODE20230417011

Complying with data protection regulations in the European Union can be very time and cost intensive for foreign companies trying to enter the market. This German company is offering external Data Protection Officer (DPO) services in order to make the process compliant and efficient. They have extensive knowledge of data protection laws and regulations, and they work closely with their client's management and staff to identify and mitigate risks related to data processing activities.

Azonosító kód: BRDE20230324015

The German company has been active in online trade with accessories for notebooks for two years and is looking for a manufacturer of high-quality padding or foam for the top and bottom insides of laptop hardcases. The padding is designed to protect the laptop hardware. The preferred material types are EPDM (Ethylen Propylen Dien Monomer) foam and PE (Polyethylen). The start-up would like to cooperate with manufacturers from Eastern Europe, the Balkans or Asia under a manufacturing agreement.

Azonosító kód: BODE20230417008

The Berlin-based German SME is a specialised service provider for technical sales and business development that brings complex technical products/solutions into the German speaking market. It is offering its expert services for products in the field of electronics, automation, photonics, renewable energy and technical software on the basis of a service agreement.

Azonosító kód: TODE20230313011

A German SME specialized in the production of metal foams has developed a method to produce open-cell hybrid metal foams at competitive prices. These foams have improved structural and functional characteristics: lightweight, energy absorbing, filtering, damping, shielding and more. They are interesting to numerous application fields, e.g. automotive, aerospace, defense or architecture. Partners to enter markets based on manufacturing, technical cooperation or financial agreements are sought.

Azonosító kód: TODE20230302006

A German company offers a commercial greywater recycling system that pays off within a few years. The system is based on a membrane bioreactor principle. It is almost maintenance-free and very cost efficient. Applications are in commercial buildings, hotels, apartment complexes as well as public utilities. Partners are sought for commercial agreements with technical assistance

Azonosító kód: TRDE20230303006

A German SME is working in the field of microfluidic Lab-on-a-Chip systems for point-of-need applications like in-vitro diagnostics (veterinary and human) and food analyses. The company wishes to extend its product and application portfolio and looks for partners, who have developed assays and want to transfer them into a Lab-on-a-Chip environment in the frame of, e.g., for commercial agreements with technical assistance, technical collaboration agreements or research cooperation agreements.

Azonosító kód: BODE20230216023

Azonosító kód: BODE20230323019

Developing IoT products with a powerful BLE (Bluetooth Low Energy) connectivity can become very challenging. Small Configuration changes on the wireless traffic flow influence the link quality in BLE connections, posing risks to the development. For this purpose, a specialized BLE analysis system is offered, which analyzes surrounding BLE connections and detects transmission defects automatically. Outsourcing, license and/or further commercial agreements are possible.
